Response to Amendment

The following is in response to the amendment filed on September 22, 2003.

Claims 1-21 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

In an approach system having a headbox feed pump, a gas separation tank that feeds reduced gas pulp to the headbox, and a mixing pump that feeds pulp to the gas separation tank, the prior art does not disclose or suggest regulating the operational mode of the mixing pump in response to a production change while simultaneously regulating the headbox feed pump. The control method of the present invention anticipates pulp level fluctuations within the gas separation tank and pressure fluctuations within the headbox arising from the production change through control of the mixing pump. Prior art control systems in response to a production change either regulate the headbox pump alone or regulate the operating parameters of the tank itself in order to control the level of the pulp within the gas separation tank.

Response to Arguments

Applicant's arguments regarding previous rejections based on Kaiser (US 4,478,615) are persuasive. The amended claims now read over the prior art. Kaiser teaches regulating the surface level in a gas separation tank in order to minimize pressure fluctuations in the headbox rather than simultaneously regulating the mixing pump and headbox pump.
